

the easiest way to *unwind*,
to add instant *atmosphere*,
and to *create* the perfect cocktail

Gimme-a-drink

the *Pitch*

It's been a long week...but you made it to the weekend. Across the room you see them... "Hey, come up for a drink tonight?"

Now for the easy part:

- Open *gimme-a-drink*
- Turn on that instant *atmosphere...*
there are five moods for you to choose from.
- Create that *special drink...*
a carousel of drink ideas and images is at your fingertips.
just select and a recipe is ready!

With just a few selections, the night is *yours*.

the *Concept*

- It began with a feeling...*relaxation*. Something we all need, as students, as developers, as humans.
- How do we experience *relaxation*, and how do we share it with others?
 - Individually, music can *quiet* our busy minds and help our bodies to *destress*.
 - Socially, alcohol is a shared interest...helping to bring us *together* to slow down and *enjoy*.
- We created *gimme-a-drink* as a guide for *relaxation* and *enjoyment* of our downtime.
- We hope all app users can find the time and space for both.

the *Process*

- **Technologies:**
 - **Materialize CSS**
 - **HTML**
 - **javaScript**
- **Tasks/Roles:**
 - **Tasks were decided during member meetings, discussing concepts for how we unwind, and how to share that with others.**
 - **Roles were determined based on interest, with all members coming together to complete code for the final product.**

the *Demo*

See the app in action...how could it help you *unwind*?

the *Future*

- Upgrade music player:
 - apply web server using Python
 - allow YouTube searches and playlist additions
- Upgrade the cocktail options:
 - search by ingredients
 - search by spirit

- Develop app for android/iOS:
 - add casting functionality for both music and data
